PROJECTS

E-commerce

Create RESTful API that achieves all E-Commerce needs.

API Documentation: Postman

Key Achievements:
- ✓ Developed a RESTful API that meets all E-commerce requirements.
- ✓ Integrated with payment gateways (Stripe) to enable secure transactions.
- ✓ Product, Category, Subcategory, Brand, Coupon, Users, Address, Wish list, Review, Cart, Order Management.
- ✓ Implemented filtering, sorting, and pagination for all resources.

Tech Stack:
- ✓ Node.js, Express.js, MongoDB, Mongoose.

Online Learning Platform Technologies Used: Express.js, MongoDB, Socket.io, Node.js, Mongoose, JWT, Nginx, Pay mob
- ✓ Developed an online learning platform with Express.js and MongoDB.
- ✓ Implemented course management for uploading and organizing content.
- ✓ Designed secure user authentication using JWTs. Created schemas for students and teachers for progress tracking.
- ✓ Integrated Pay mob for payment handling and HMAC web hook verification.
- ✓ Managed MongoDB database efficiently.
- ✓ Employed custom error handling throughout the application.

Technologies Used: Laravel (Backend) Developed a thread application with comprehensive user and post management.
- ✓ Implemented user authentication with token-based log in/log out.
- ✓ Enabled CRUD operations for user and post management.
- ✓ Added functionality for liking/unlinking posts. Implemented comment replies and user follow/unfollow features.
- ✓ Added user block/unblock functionality.
